

## The H-17 Kit

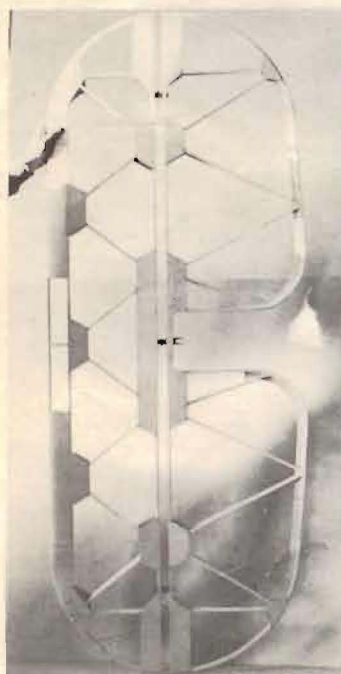

**T**HE H-17 will soon be available in Kit form so that clubs may have the opportunity of assembling the plane themselves and enjoy the lower price. The possibility of making serious mistakes in the construction of this plane will be practically eliminated since all parts are to be numbered. Contrary to German design, and in keeping with American practice, the H-17's shipped to the

United States will be provided with a one wheel landing gear. As yet, no definite statement has been made regarding the price of this plane. However, we are looking forward to getting a quotation within a few weeks.

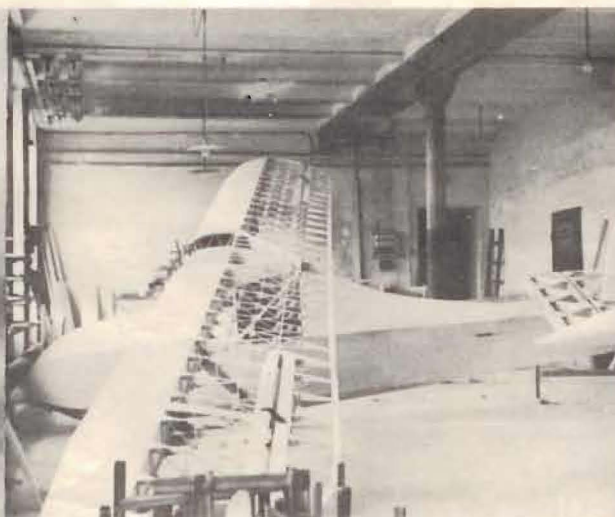

Full details, with prices, on this Kit will be given in a later number of *Soaring*.

H-17, weight 145 pounds

*Ellet*

The wings have been attached to this H-17 sailplane and are being made ready for alignment of fittings and the measurement of struts. Part of fuselage is still open so final measurements can be made of the length of the aileron push rods.
