FLIGHT WITHOUT POWER

The one up-to-date book that covers
every phase of motorless flight

Here are the first contour maps and detailed information on soaring sites all over the country, with all the facts you have longed for on types of gliders, launching methods, flight training. You will have the intriguing history of soaring; the essentials in aerodynamics, design and construction (even how to build your own ship); the meteorological and instrument knowledge that are vital, safe piloting tools.

Cloth. 6" x 9". 258 pages. 125 illustrations, maps, diagrams. \$3.50
