

FOREMOST IN AMERICAN SOARING...

For the past ten years the Schweizer Aircraft Corp. has been the consistent leader in American Soaring. Among its accomplishments are the following...

FIRST to produce an all-metal glider.

FIRST to produce a commercially certified two-place glider.

FIRST to deliver gliders to the Army Air Forces.

FIRST in production with truly post-war gliders: the 2-22, well-known all-metal two-place trainer and the 1-19 modern single-place trainer.

The **NEWEST** addition to the Schweizer Line is the new high-performance single-place sailplane, the 1-21, which embodies the latest in advanced aeronautical design. This all-metal craft with its ultra thin full cantilever wing, high aspect ratio, streamlined aluminum monocoque fuselage, molded plexiglass canopy and water ballast wing tanks for variable wing loading, promises to provide the U. S. with a sailplane which can compete with the finest foreign craft on equal terms.

The Schweizer Aircraft Corp. is dedicated to the advancement of Soaring in this country and throughout the world. To this end we strive to help all those interested through encouragement and advice and by building the safest and most practical gliders that human ingenuity can devise.
