

Ask The Man Who Flies One!

PRODUCTION PLANS FOR THE "1-23"

We have had so many requests concerning our production plans for the 1-23 sailplane that we want to make this public announcement.

We are now very busy on defense work and are producing at a record rate, however, we hope that we will be permitted to make a run of 1-23's for the 1952 season. This decision depends upon many factors including government regulation on material and production.

Since we have material for the major portion of a run, we feel that the chances look fairly good so that if you have any ideas about getting one of these high performance sailplanes, we strongly advise you to get your order in now to protect your place on the delivery list.
