

# SCHWEIZER'S 1-26 KIT READY FOR YOU

## EASY TO BUILD

This "exploded view" shows the 1-26 Kit with all parts as supplied except for items in color which are supplied as material. Building a 1-26 is primarily an assembly job—made easy by accurately built parts and assemblies; and an easy-to-follow construction manual.

ATC'D**

## A THOROUGHLY TESTED AND PROVED SAILPLANE

Approved Type Certificate No. TC-1G10 has been assigned the Schweizer 1-26 Sailplane by the Civil Aeronautics Administration after meeting the most exact requirements for a Class I Sailplane. This completes the extensive engineering and testing program and assures you of a thoroughly proved sailplane.

With kits now in production — every week will see more kits being built throughout the country. There is still time to order your kit and have your 1-26 flying by summer time. Write in for complete information and join the rapidly growing list of 1-26 purchasers.

Completed 1-26 sailplanes, in both covered and uncovered condition, will be scheduled for spring delivery for those that want to buy a completed ship. Details and price information will soon be available on this phase of the 1-26 program.
