

WINTER PROJECT = SUMMER FUN!

1-26 KIT SAILPLANE

NEW

2-22 CONSTRUCTION KIT

You get an interesting winter project and summer fun for years to come, when you build a Schweizer sailplane from a kit. These simplified kits include all fabricated parts and all material required - an ideal winter project for you and your friends. Unlike building a ship from drawings with the problems of making parts and procuring hard-to-get material, Schweizer kits eliminate these problems with difficult assemblies completed and enable you to fly in a reasonable time. When you are through you have a CAA approved metal sailplane and a lot of fun ahead of you.

The NEW 2-22C is now available in complete kit form as well as by the Unit Purchase Plan. This model incorporates many improvements over the famous 2-22 which is rapidly becoming the standard trainer in this country. The kit is an ideal project for the club and the Unit Purchase Plan can distribute the costs over a reasonable period of time. Safe, rugged design with good local soaring performance and yet "forgiving" characteristics, the new "C" model is the trainer for you.

The 1-26 SAILPLANE KIT is steadily increasing in popularity as more and more of these ships take to the air. Although small in size, (40' span) the 1-26 is capable of big things - Diamond C heights and distances have already been made, yet is easy to fly, stable and enables you to take part in friendly, one-design competition.

Now is the time to place your order for a Schweizer CAA approved sailplane kit so you will be ready for the flying season.

See the Schweizer Dealer in your area or write for information.

Orders for complete and uncovered sailplanes, both 1-26 and 2-22C, now accepted for prompt delivery. Orders also being accepted for early Spring delivery of the 1-23G.
