

# FOR SOARING AWARDS

Sport Canopy for Summer Soaring

## THE 1-26 IS TOPS

What is the fascination that soaring holds for so many pilots? Why are newcomers being attracted to the sport each year in ever increasing numbers? Is it because of the pleasant personal challenge — a challenge of the pilot's own choice — the ever widening horizons as experience is gained? Or is it the appeal of a natural sport — the matching of an individual's skill with the forces of nature — three dimensional skiing or sailing.

Whatever the reason, soaring is the finest form of fun flying and the 1-26 is the reigning favorite. Its excellent flight and handling characteristics, rugged safety features and versatility have been proven in thousands of soaring hours in every section of the country.

The ATC'd 1-26 was designed and produced to meet a specific need in North American soaring. A sailplane for the majority of pilots who soar for the fun of it. The person who enjoys local and FAI Award flying or the challenge of one design competition, where the emphasis is on pilot skill and ability.

The compactness and ease of assembly makes the 1-26 ideally suited for the family who takes soaring vacations to visit different soaring sites, to experience the many different types of soaring in new and interesting areas. The National 1-26 Association will help you discover the fun of one design fly-togethers.

For the fun of it contact your nearest Schweizer Dealer. There is a 1-26 custom tailored for you. ATC'd models are available in complete, ready-to-fly or several kit options.
